Document Object vs Window Object

➢ Document objects represents any HTML document or web page that is loaded in the browser.
➢ Window objects represents a browser window or frame that displays the contents of the webpage.
➢ Document objects is loaded inside the window
➢ Window objects is the very first object that is loaded in the browser.
➢ Document objects is the object of window property
➢ Window objects is the object of the browser.
➢ The document is part of BOM (Browser Object Model) and DOM (Document Object Model)
➢ The window is part of BOM, not DOM.
➢ Properties of document objects such as title, body, cookies, etc can also be accessed by a window like this window.document.title
➢ Properties of the window object cannot be accessed by the document object.
➢ Syntax for document object: document.propertyname;
➢ Syntax for window object: window.propertyname;
